

Bridge Faucet

Need Tools:

Basin Wrench

Adjustable Wrench

Teflon Tape

Silicone Sealant

Screwdriver

1. Shut off hot and cold water supply under sink. Plug sink drain with cloth to avoid losing small parts. Remove old faucet.

2. Set the faucet in place, insert the inlet shanks through the sink holes, and press down. Assemble the washers and lock nuts on the inlet shanks, and then tighten the nuts by hand.

3. Apply Teflon tape to inlet shanks and connect supply lines.

4. Install spout to faucet body and tighten it.

5. Install faucet handles onto the stems.

6. Apply Teflon tape to threads on faucet shank and shut off valves, connect water supply line.

7. Turn on water supply valves, and check for leaks, especially all supply line connections.

8. Remove aerator and turn on both hot and cold valves, let water run for at least one minute, this will clear any debris left in the line, reinstall aerator.

Warning!!!

- Do not over-tighten nut during installation.
- Over-tighten may crack the vase and cause water leak.
